Gant Rope Meter

The E. M. Gant Mfg. Co., Ethridge, Tenn., have recently added to the line of product the Gant Rope Meter. It handles any size rope from one-quarter to one inch, and is designed for the retail hardware and general stores. It is operated by simply pulling the rope through it. The meter registers one hundred

feet and is said to measure accurately to the fraction of a foot. It is cleared by raising the hand knob and turning either forward or backward, until both the hand and counter stand on naught. The manufacturers have published a booklet fully describing the meter and showing a number of ways in which it may be used.
